Product Description

This fine sized granule has a high particle count for excellent coverage of treatment areas. Its characteristics make it well suited as a carrier in crop protection and turf/ornamental applications.

Mineral Description

AGSORB[®] from Mounds, Illinois is a Montmorillonite mineral in the non-swelling bentonite class. Its low bulk density and high absorptivity allows higher liquid holding capacity. Our mineral processing maximizes the granule's micropore space. AGSORB[®] heat treatments impart a hard, inert granule with a high resistance to attrition.
