## Product Description

This powder works well as a seed treatment/coating, in formulations requiring a flowable carrier, or in wettable powder formulations. This RVM material can slake and become cloudy in liquid formulations.

## Mineral Description

AGSORB<sup>®</sup> from Mounds, Illinois is a Montmorillonite mineral in the non-swelling bentonite class. Its low bulk density and high absorptivity allows higher liquid holding capacity. Our mineral processing maximizes the granule's micropore space. AGSORB<sup>®</sup> heat treatments impart a hard, inert granule with a high resistance to attrition.
